# Aviatrix Overview

# Building a Secure Cloud Network for the Ages

- Pioneers and experts in Networking, Security and Cloud technologies
- Recognized leader in emerging multicloud networking software market
- Enterprise-grade networking with security, agility and cost optimization
- Optimizes all major clouds for performance, security, service delivery
- Networking 600+ of the world's most innovative and recognized companies
- 10+% of Fortune 500 and 70 of Global 2K enterprises run on Aviatrix
- Global presence with 24x7 support
- “Customer for Life” philosophy

**Customer / Partner  
for Life**

**Realized Value >  
Cost**

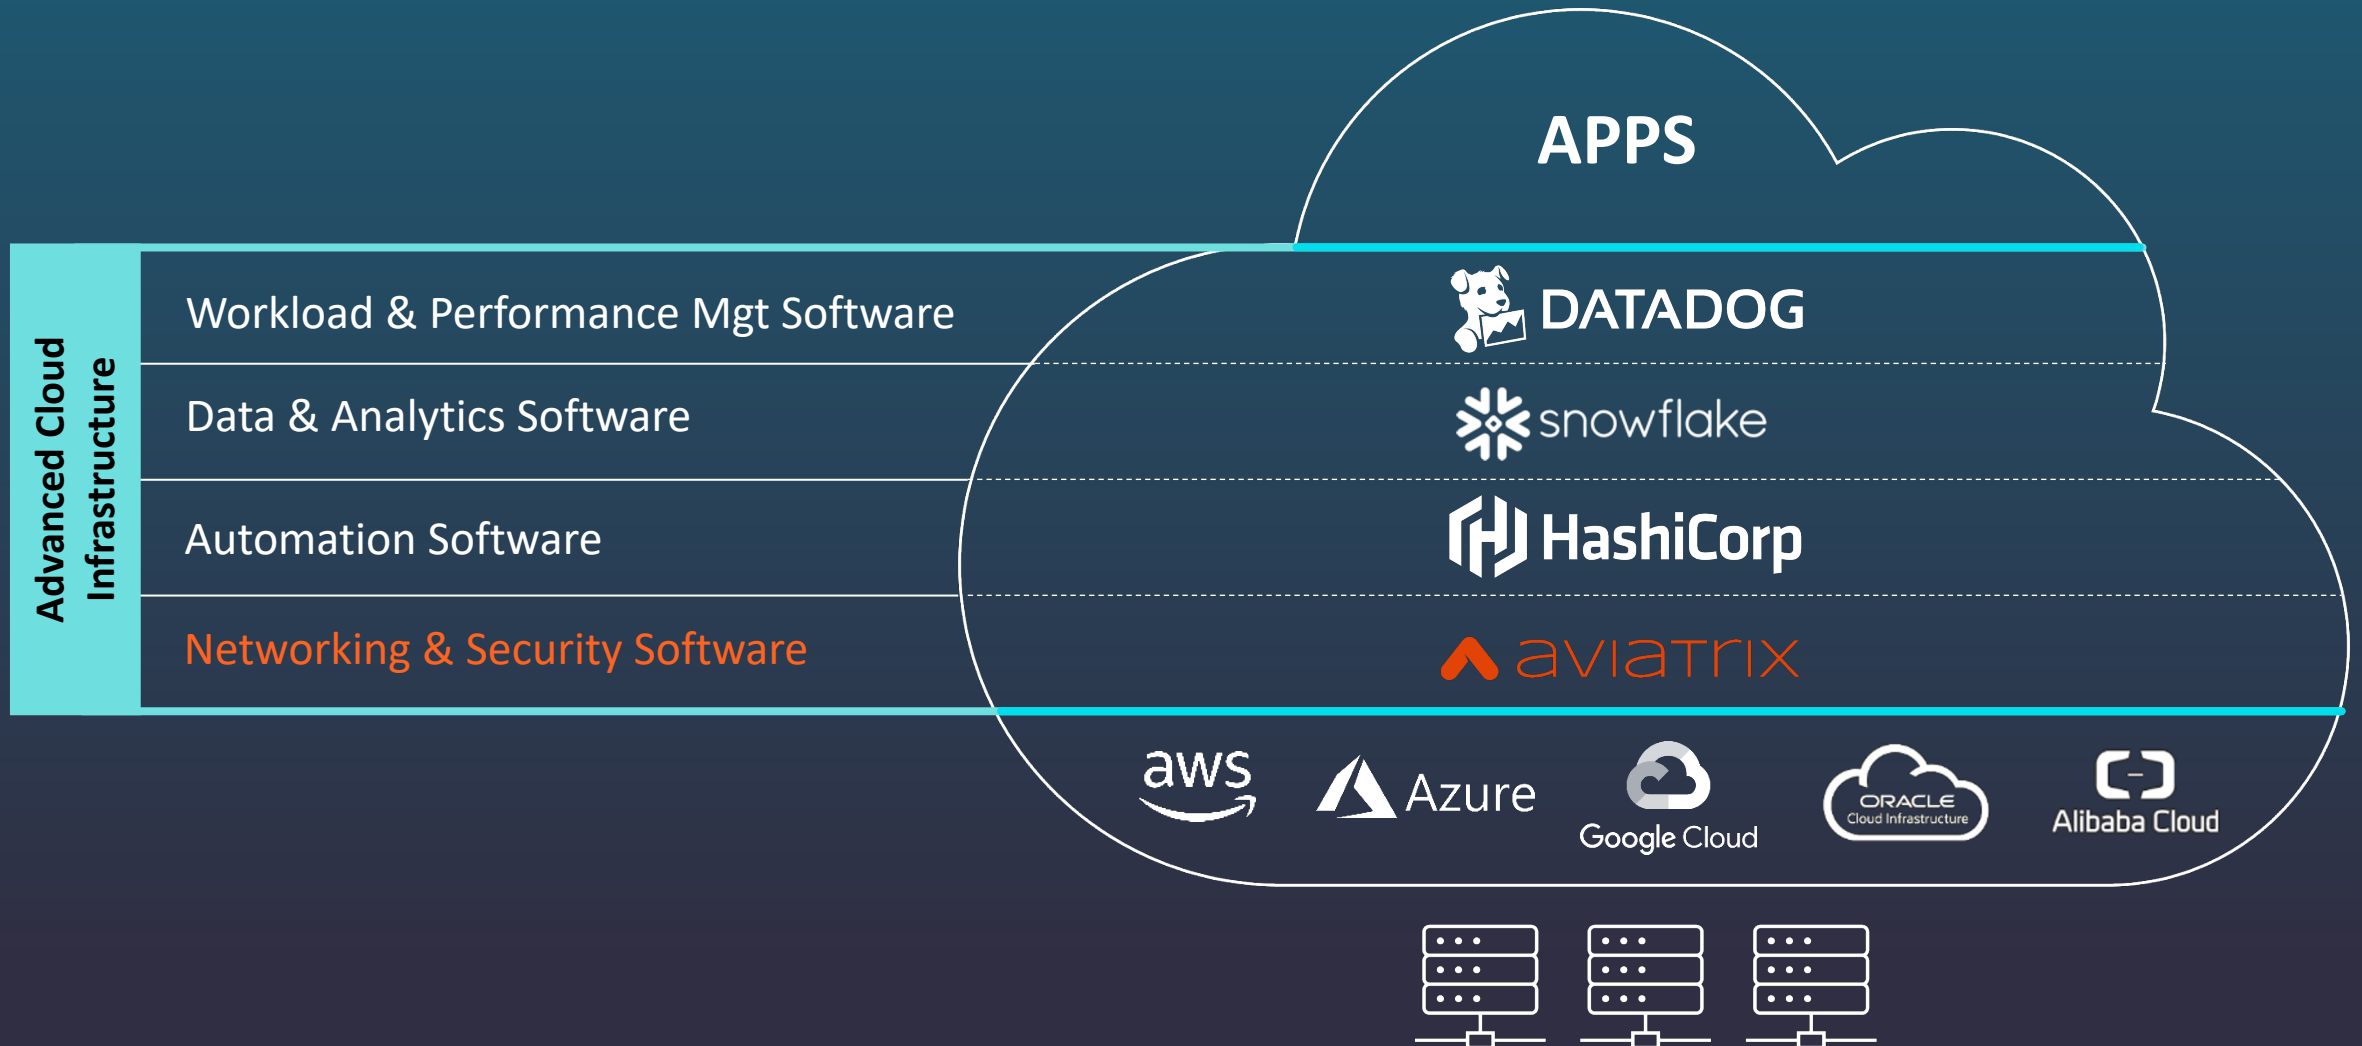

**Predictability of  
Outcome & Cost**

**Architecture  
Matters**

# Today's Cloud Operating Model Requires Advanced Cloud Services & Infrastructure

# Cloud Networking is Fundamentally Different and Difficult

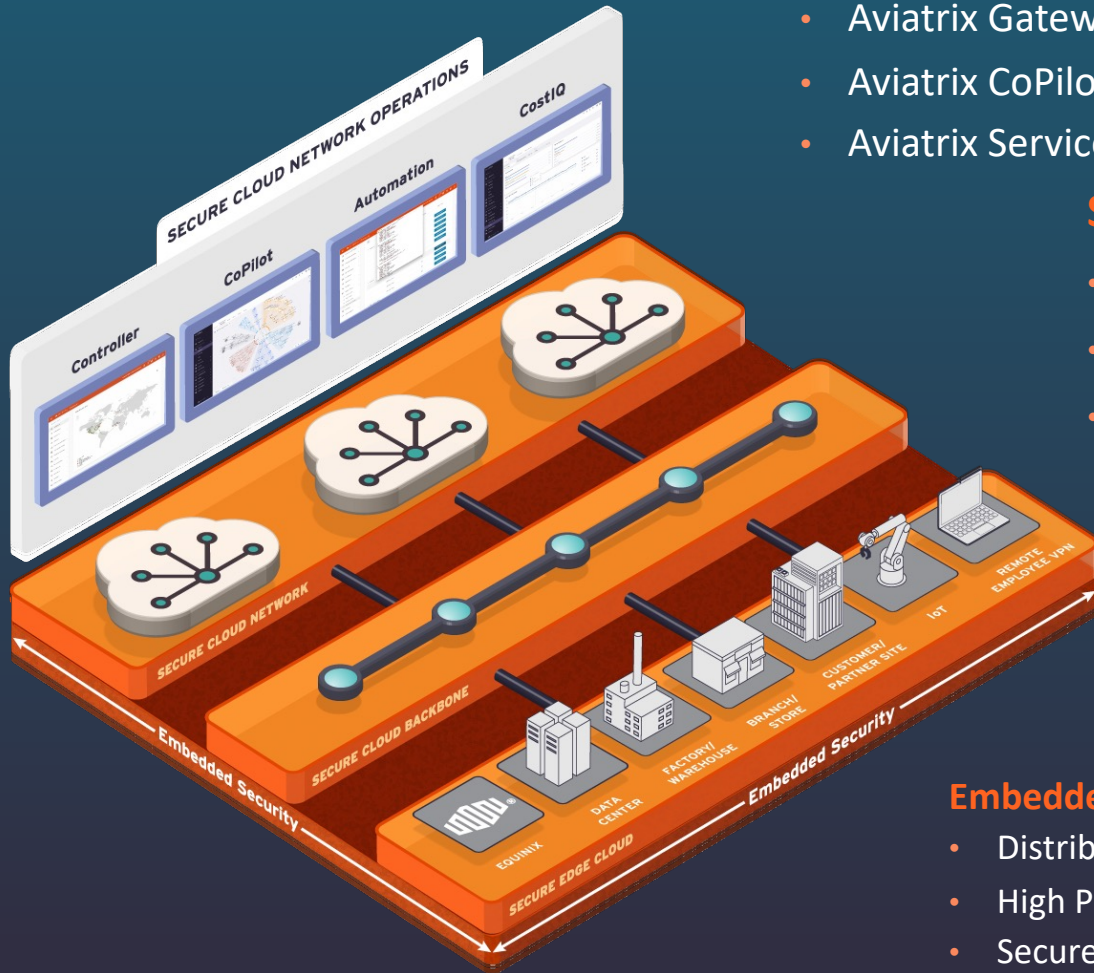

- Mission critical applications require a secure and stable infrastructure
- Business downtime costs millions and reputational risk
- Limited cloud native functionality puts your business at risk
- Skill gaps slow down cloud adoption and costs IT cycles
- Cloud Native Networking is complex, unintuitive and is unique within each cloud
- Today's cloud operating model requires a purpose-built solution for cloud networking and security

“In the Cloud...  
good enough is no  
longer good enough.”

# Aviatrix Secure Cloud Networking

## Cloud Agility and Automation with Enterprise-Grade Resiliency and Security

### Secure Cloud Network

- Aviatrix Gateway distributed multicloud dataplane with embedded security
- Aviatrix CoPilot centralized network and security operations center
- Aviatrix Service Provider terraform for IaC module development

### Secure Cloud Backbone

- High-performance multicloud transit networking
- Enterprise-grade operations and troubleshooting
- Advanced, embedded zero-trust security

### Secure Edge Cloud

- Extends cloud operational model to edge locations
- Enterprise: High-performance encryption between cloud and on-prem
- Equinix Edge: Deployed on hosted Equinix Network Edge platform

### Embedded Security

- Distributed Cloud Firewalls
- High Performance Encryption – up to 100 Gbps
- Secure Cloud Egress
- Distributed Threat Protection and Prevention
- L7 Firewall Service Insertion

# Top Aviatrix Customer Use Cases

Datacenter Evacuation

Mission-Critical Apps

M&A Integration

Multicloud

## Our Products

Secure Cloud Networking

Embedded Cloud Network Security

Secure Cloud Network Edges

Cloud Network & Security Operations

Advanced Technical Services

Single or Multicloud  
Environments

## Our Solutions

Secure Cloud Networking

Secure Egress

Secure Cloud Backbone

Secure Cloud Edge

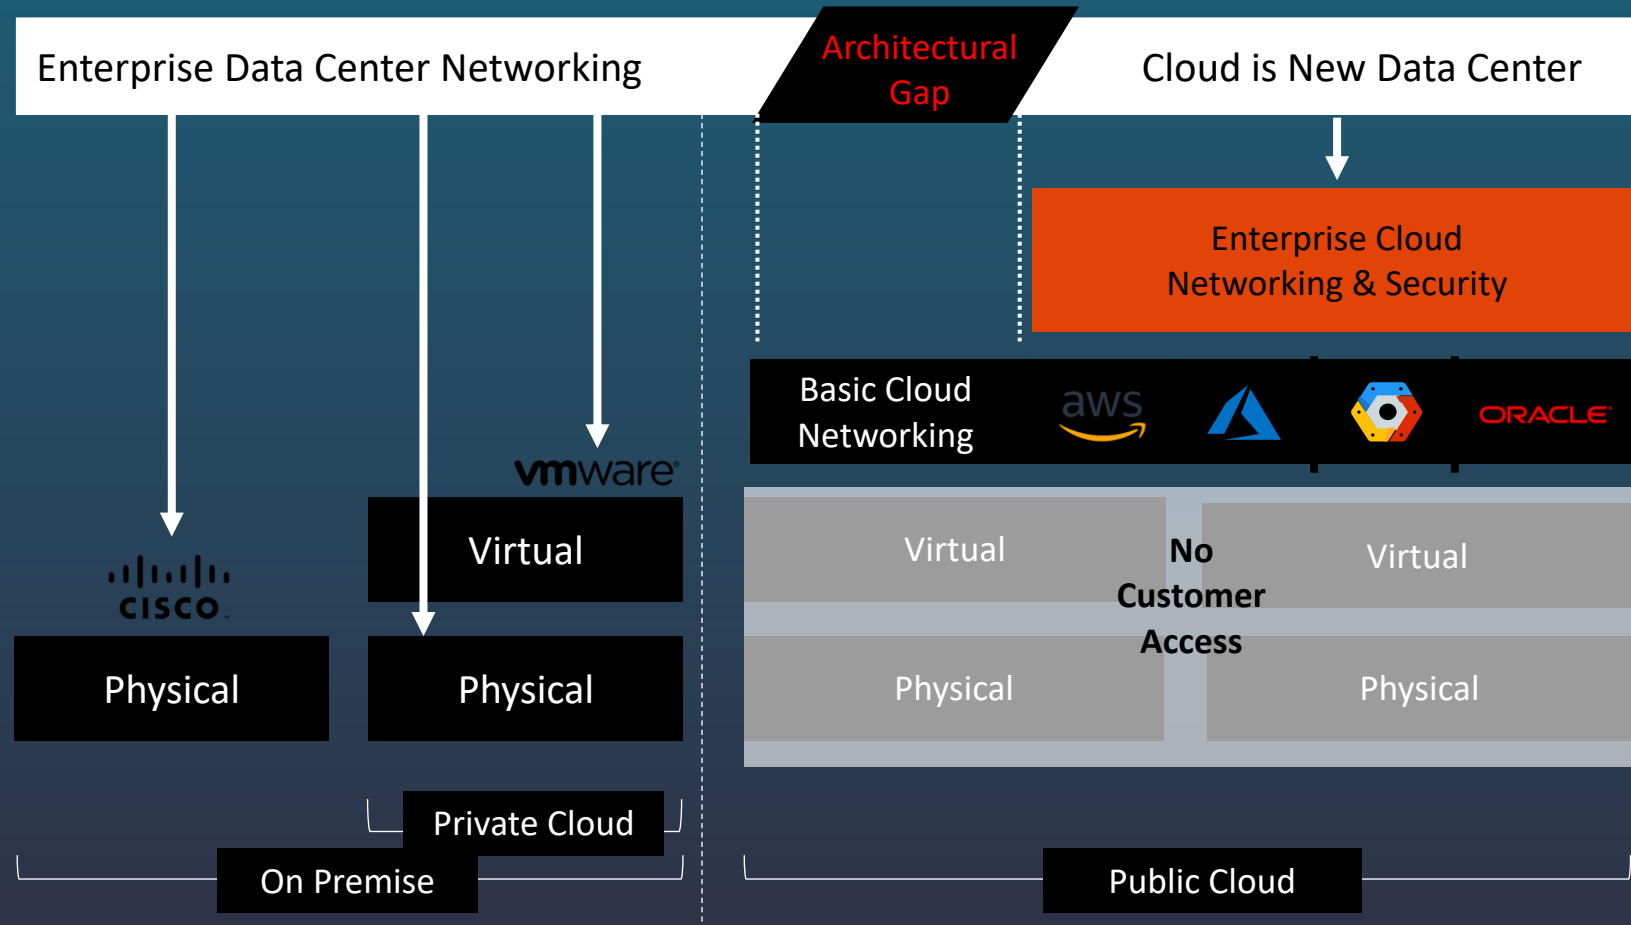

Secure Cloud Networking for SPs

# Multicloud Network Architecture (MCNA)

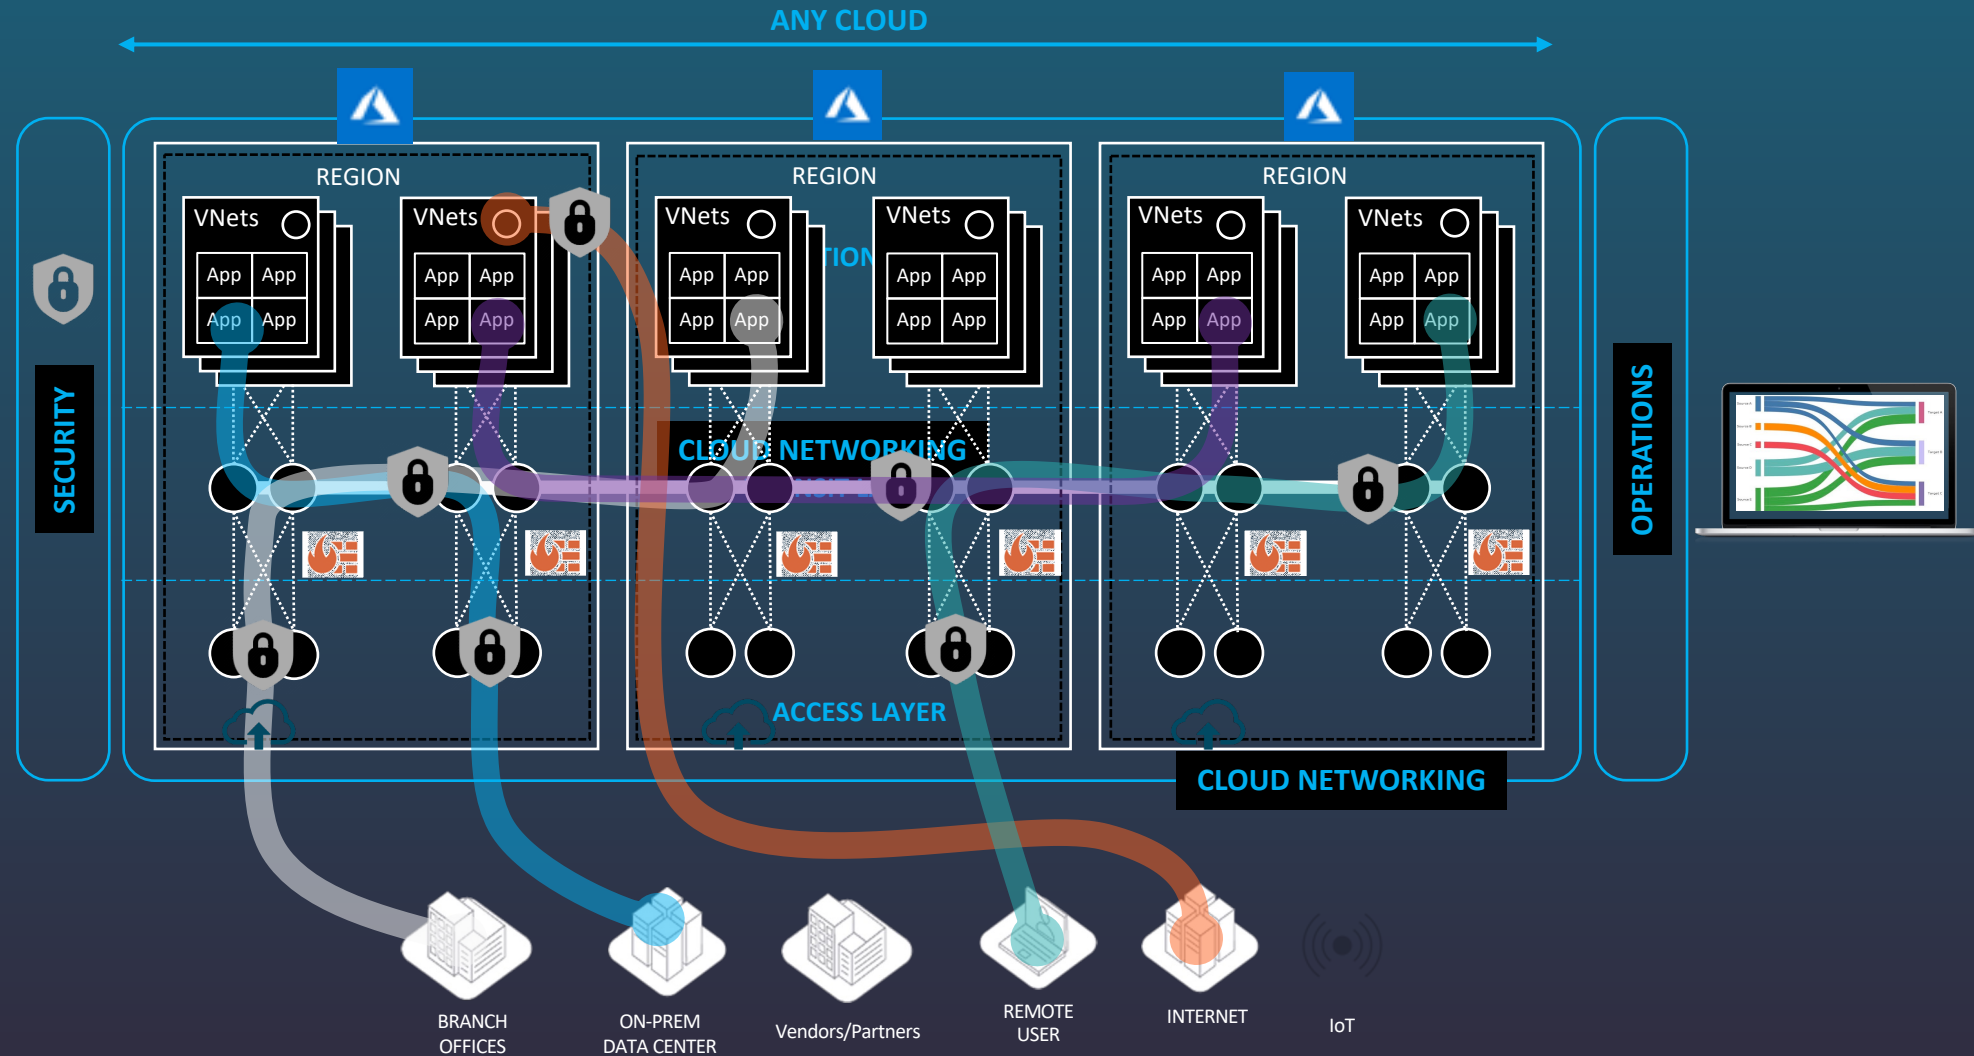

# Enterprise Cloud Network Architecture?

## Multi-Cloud Networking

# Cloud Network Reference Architecture

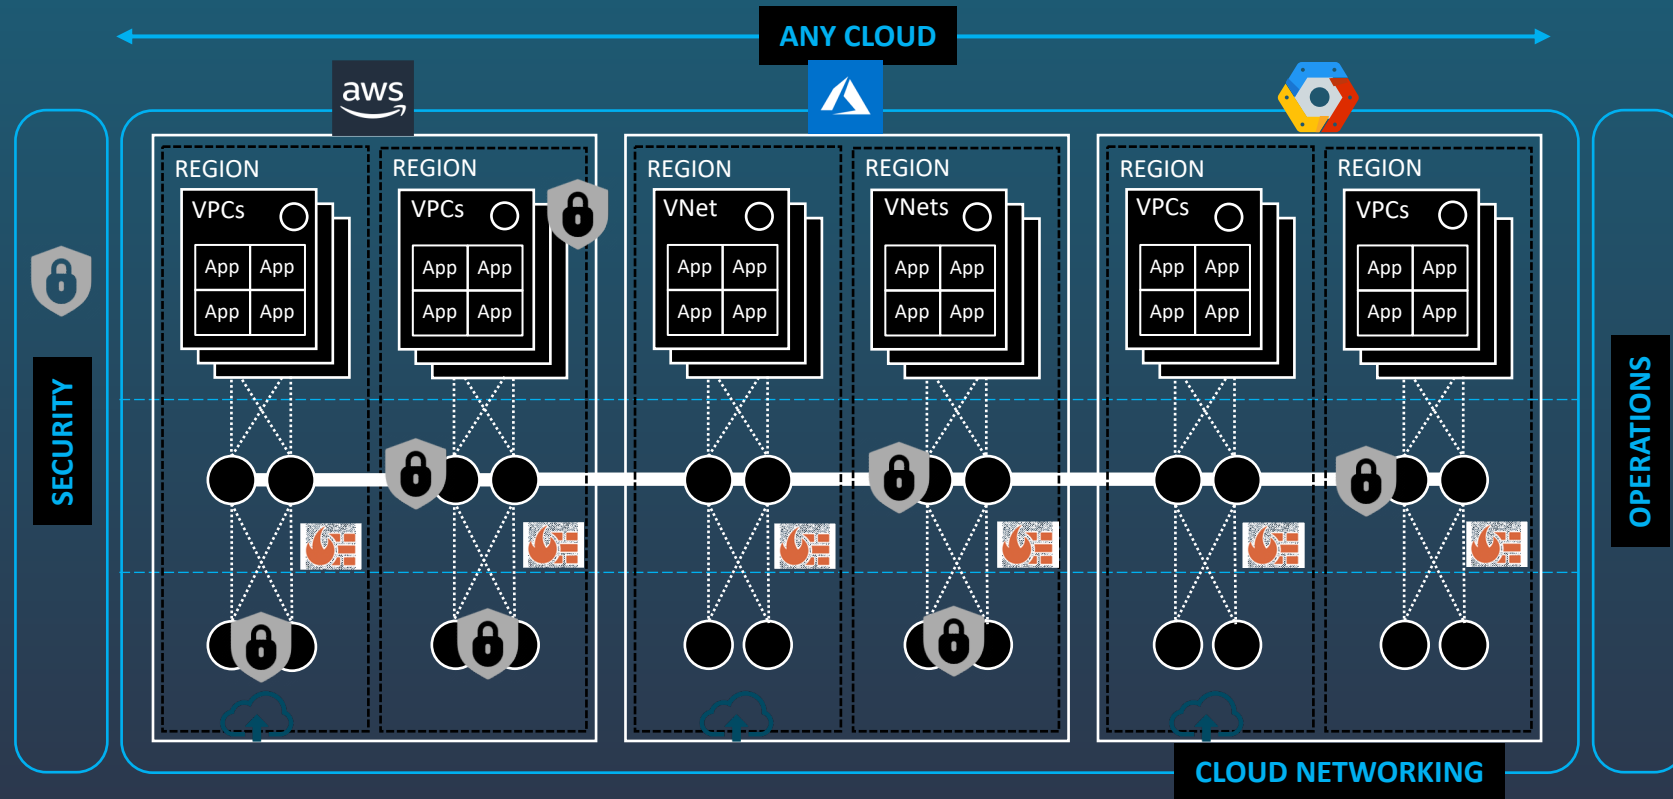

- Single Cloud, Multi-Region, Multi-Account
- Repeatable Network Design & Infrastructure as Code Automation
- Service Insertion & Chaining
- Consistent Security Policy
- Common Operational Visibility and Control

# Multi-Cloud Network Architecture (MCNA)

- The Blueprint of Your Multi-Cloud Network Design

- Single Cloud, Multi-Region, Multi-Account
- Repeatable Network Design & Infrastructure as Code Automation
- Service Insertion & Chaining
- Consistent Security Policy
- Common Operational Visibility and Control

# Aviatrix Platform Components

# Aviatrix Software

## Aviatrix Controller

The Brain. Software download from CSP Marketplaces.  
Only one required, manages control plane, never in data plane

## Aviatrix Gateways

Foundation of Aviatrix Multicloud data plane. Operates on cloud compute.

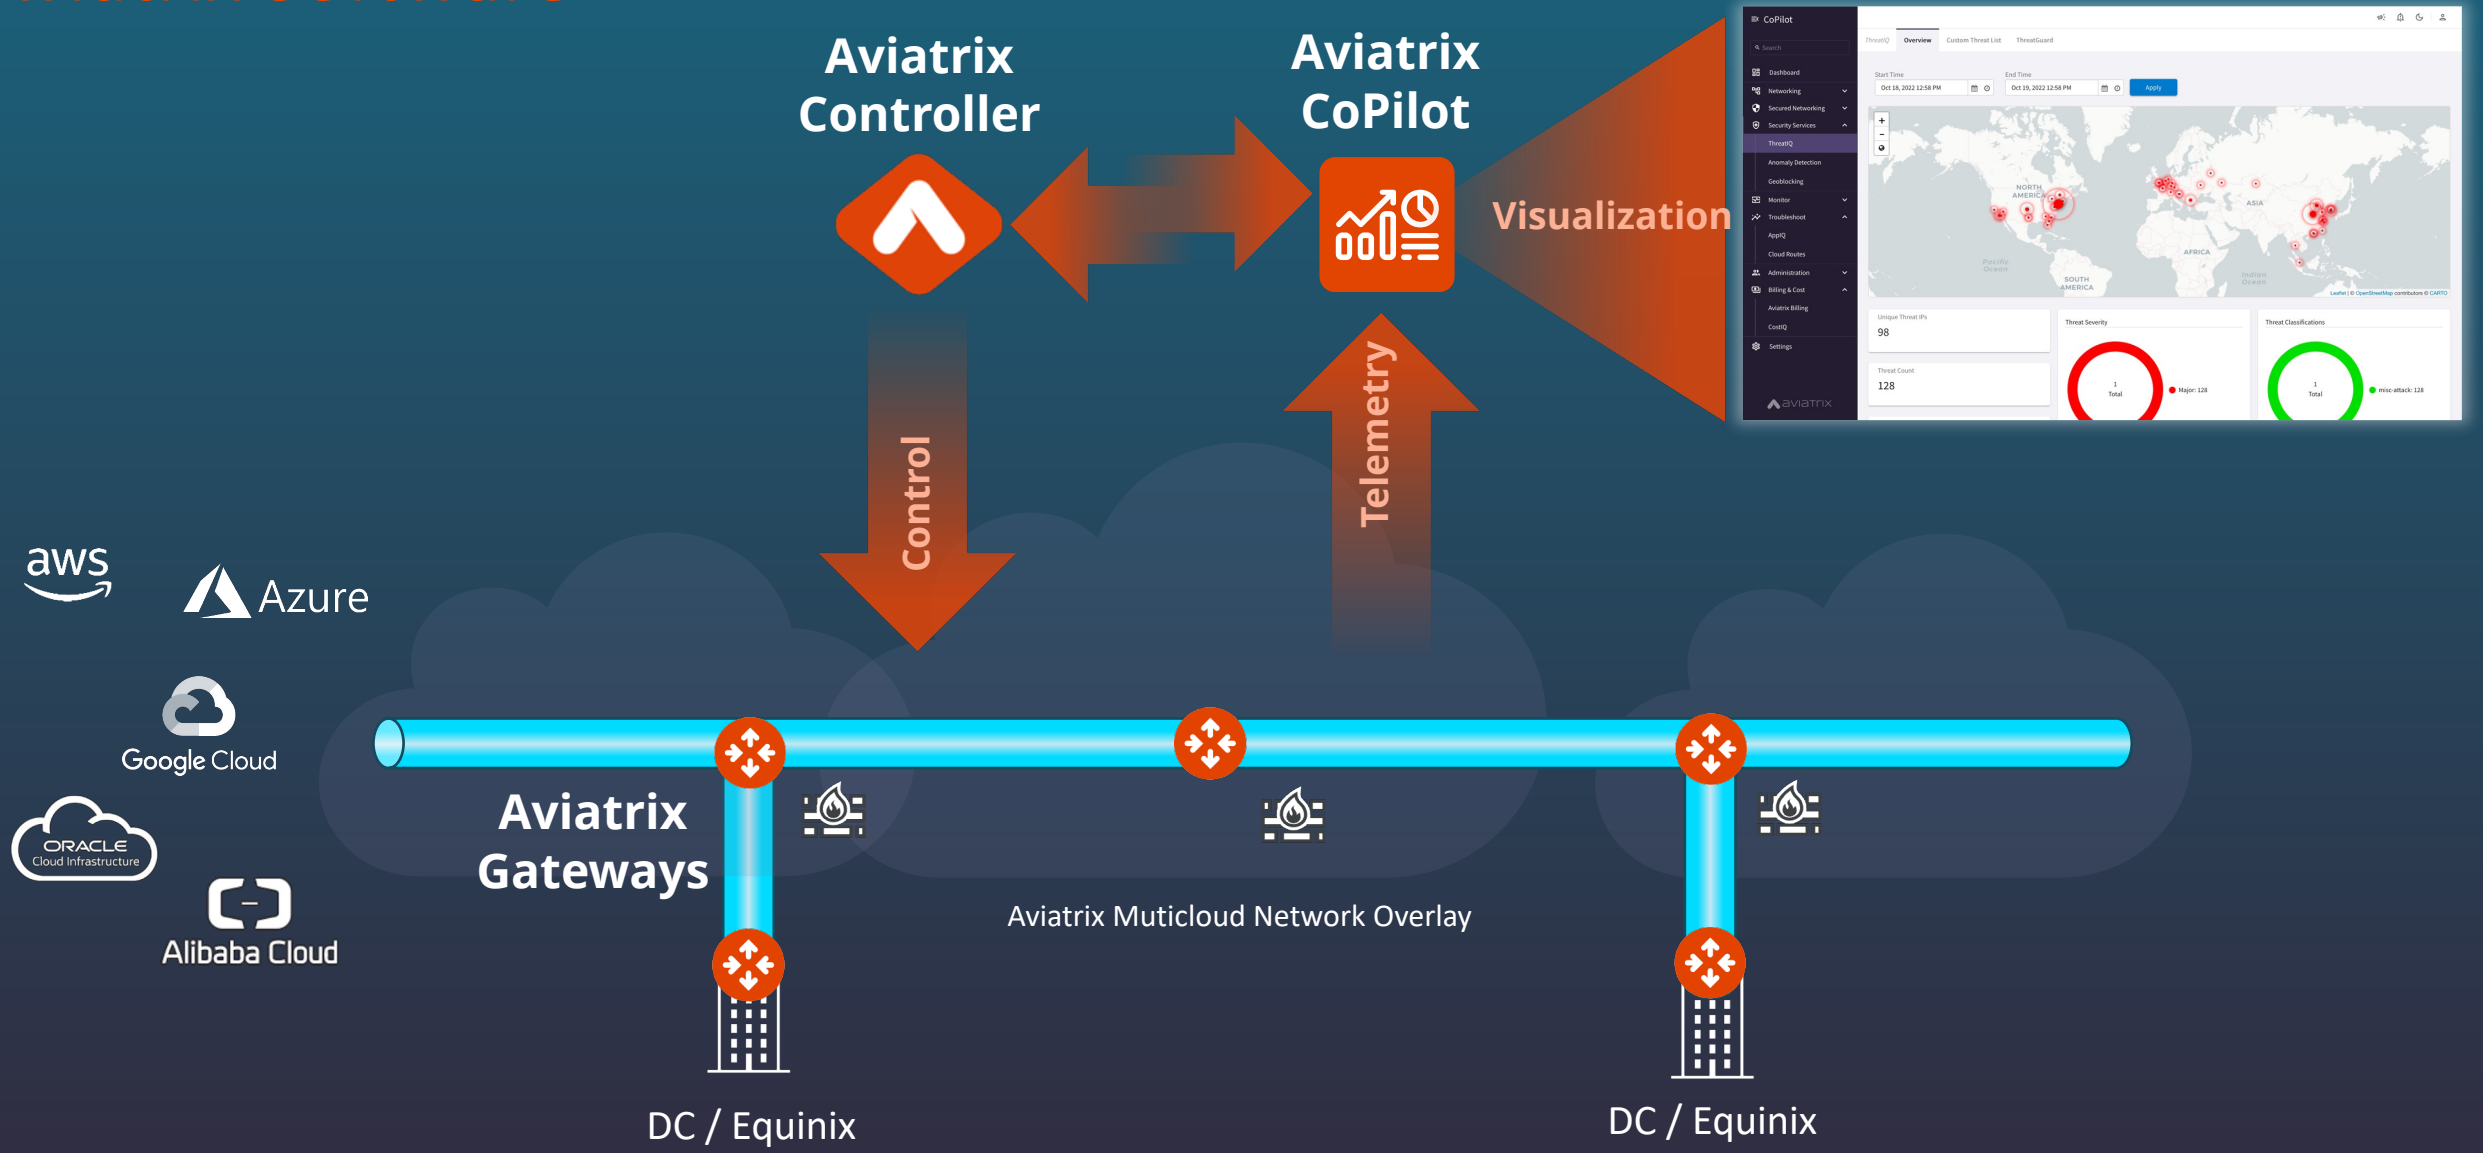

Advanced cloud network routing, network telemetry, traffic inspection and policy enforcement

## Aviatrix CoPilot

Aviatrix interface to Controller and enterprise-grade visualization.  
Supports RBAC, programmable policy intent, export base Terraform

# Aviatrix Software

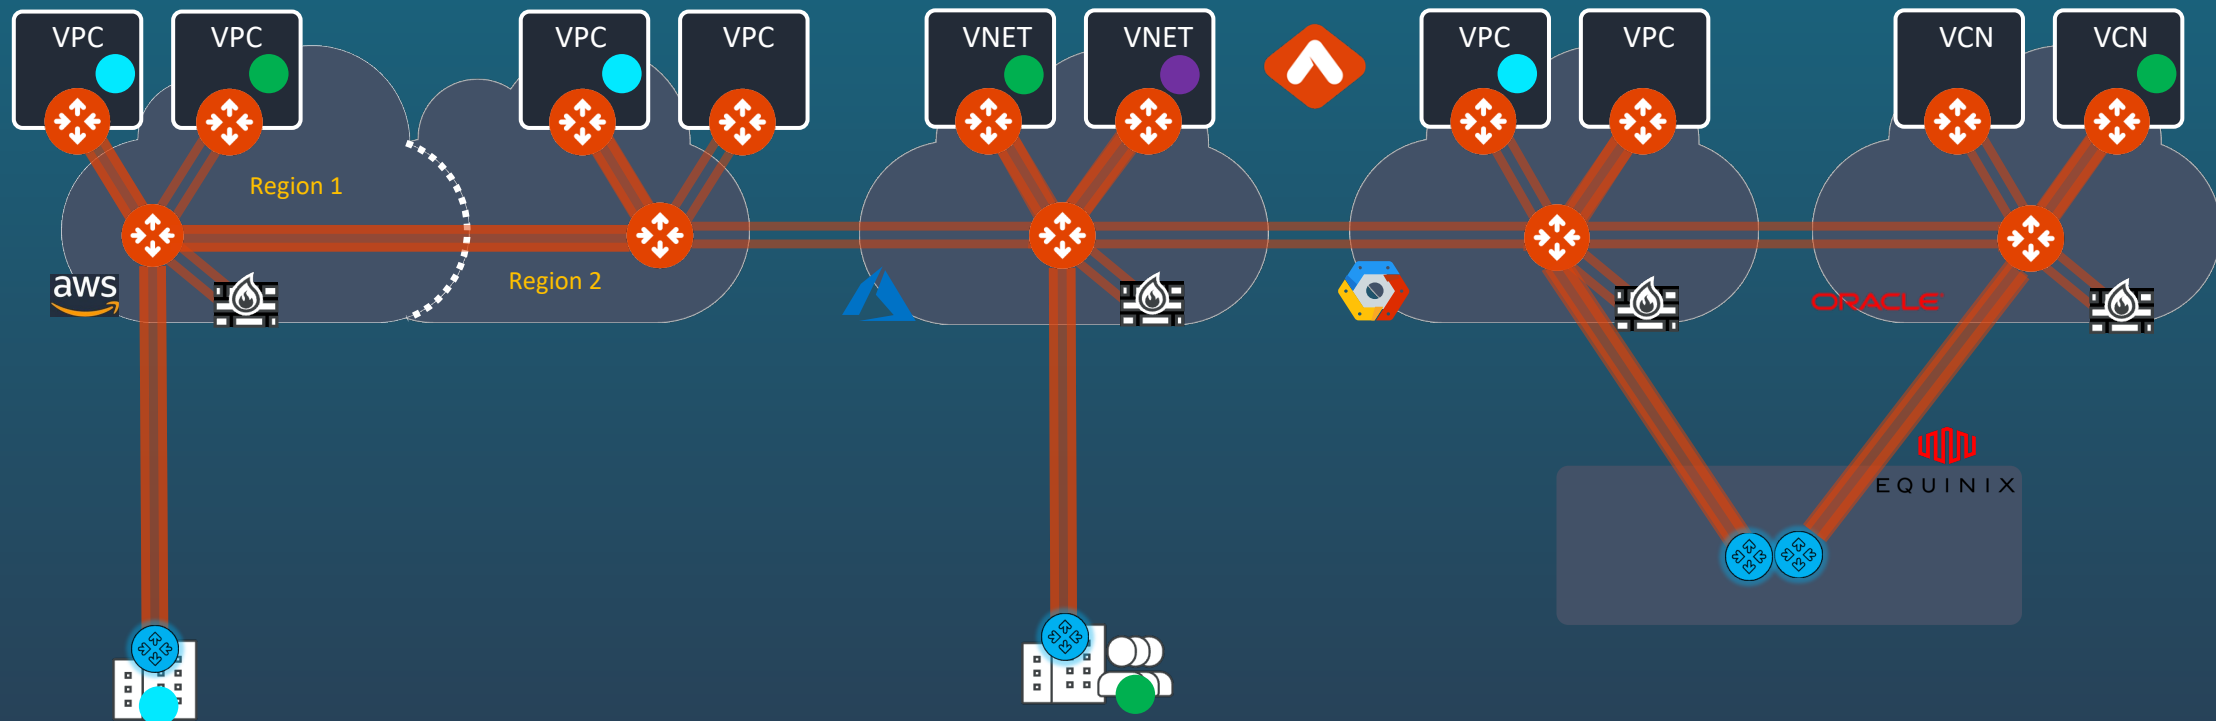

# Embedding Intelligence in the Aviatrix Data Plane

- **Intelligent Routing**
  - Dynamic Traffic Engineering
- **Distributed Firewalling**
  - L4 / L7, Programmable Intent
- **Telemetry**
  - Network, Security and Cost
- **Load Balancing**
  - Intelligent Load Balancing, Bi-Directional Hashing
- **Additional Security**
  - IDS/IPS, URL Filtering, Vulnerability Scanning, Threat Detection, Anomaly Detection
- **Additional Tools**
  - Auto-scaling, Packet Capture, Ping Trace-Route

## Repeatable Architecture

*One robust architecture across single-cloud or multi-cloud environments*

## Ensure Network Correctness

*Alleviate manual complexities and errors by automating/provisioning routes*

## Achieve Operational Visibility

*Real-time network data and analytics that make troubleshooting easy*

## High-Availability

*Highly-resilient architecture minimizes downtime for mission-critical applications*

## End-to-End Encryption

*High performance encryption – 50x the industry standard*

## Automate Network Segmentation

*Easily configure communication between workloads, users, and sites across multiple clouds*

## Service Insertion & Secure Ingress/Egress

*Rapidly deploy firewall, FQDN filtering, & monitoring/analytics across your network*

## Threat Identification & Remediation

*Identify, notify, & block threats to your network*
